Questions

1. What did I do this week?

- Replaced dictionary with trie data structure
- Updated the Markov model and text generation function to incorporate the new adjustments

2. How has the program progressed?

- The core functionality is working (the model runs correctly given n and length). The quality of the output needs some work, some chunks read naturally while others are entirely unintelligible.

3. What did I learn this week/today?

- This week I learned about trie trees, how they work and how to alter them to fit into a markov model.

4. What remains unclear or has been challenging?

- The intelligibility of the text (at the moment, the generated texts are hard to understand).
- I am also not sure how I will address amending the preprocessing so that it works well for multiple files of different styles. The current code was designed specifically for news articles.

5. What will I do next?

- Add multiple file support
- Allow users to specify sentence length and number of sentences to generate
- Work on the user interface and update the unit tests
