Questions

1. What did I do this week?

- I researched the project idea and started formulating how the model will work.
- I also began learning about Markov chain models how they can produce text.
- I looked into useful data structures (i.e dictionaries, lists, tuples)
- I initialised the repository and set up Poetry for dependency management.

2. How has the program progressed?

- The project is still in the very early stages. So far, the main focus is on topic research (Markov chain text generation).
- The direction I want to take the project in is becoming clearer.

3. What did I learn this week/today?

- I've learned the basics of Markov chain text generation (transition probabilities etc.).
- I also learned about how different data structures might work in relation to Markov chain generators.

4. What remains unclear or has been challenging?

- It has been challenging to grapple with the different orders of a markov chain model especially due to the added complexity.
- In addition, deciding on the preprocessing methods have proven to be more difficult than anticipated.

5. What will I do next?

- I will implement a basic markov chain text generator and experiment with small text datasets.
- I will then work on modular code and higher-order models.
